Submit Notes

The config file option 'submit' was used.

General Notes

MPI startup command:

mpirun command was used to start MPI jobs.

eth0 (10 GigE) was specified at the mpirun command line for MPI message passing
 eth3 (1 GigE) was specified for non-MPI communication.

BIOS settings:

Intel Turbo Boost Technology (Turbo) : Enabled (the default)

RAM configuration:

Each compute node has 64x8-GB RDIMMs.

Network:

Four compute nodes connect to one Cisco Nexus 7018 switch
 via 10 GigE port.

Job placement:

Each MPI job was assigned to a topologically compact set of nodes, i.e.
 the minimal needed number of compute nodes was used for each job:
 2 compute nodes for 64 ranks, 4 compute nodes for 128 ranks.

PBS Pro was used for job submission. It has no impact on performance.
